Question 9

Question 10

Question 11

Question 12

Question 13

Question 14

No answers was given – as 100% selected NO to Question 13.

Question 15

Question 16

Question 17

If YES, state them.

i)

Count	Response
1	One is entertaining and the other requires the use of my brain cells
1	i have to concentrate when listening to academic material
1	music gets me listning and academic material is kind of not interesting
1	music is for fun and you dnt have to listen to evry word unlike academic material
1	music is more entertaining
1	music is more relaxing, academic material requires my attention
1	music is relaxing and patholgy can be a bit hectic
1	you enjoy listening to music and do it because you want to, but you are forced to listen to academic material.
1	music is an even tone whereas academic work needs regular breaks to understand and absorb the words
1	listening to music ic calming...it relaxes me...when listening to academic material it requires attention

ii)

Count	Response
6	
1	It is amazing how one learns the words to a song so much quicker as opposed to academic .
1	academic material has no music in the background but afterall that might be somewhat distracting
1	the slides and music made the podcasts interesting
1	when it comes to academic podcasts one tends to loose interest after a while.

Question 18

How do you feel about sharing your MP3 player to listen to academic material?

Count	Response
1	I would share it for academic purposes
1	i think its great to have many resources to study
1	i wont... i love music too much...id keep them on my laptop
1	if i knew it would have a big impact on the improvement of my marks i would do it
1	its cool as long as its infront of me
1	not a bad idea. the mp3 player is with you all the time so it makes it easily accessible.
1	sounds like a good idea, dont mind giving it a try.
1	I think that it would be great. I can study at my own pace and if I am confused can always go back and listen again and again.
1	i would only borrow it to very close friends...i can't risk having something so expensive being stolen by someone i just share a class with
1	Some prefer working in groups and some dont. However with this course, one is encouraged work in a team. This is the ideal method so that one can take regular breaks in between with the option to reverse, forward and find what one is looking for at any given time. I do not have a problem with sharing academic material. This is an excellent method.

Question 19

Question 20

Question 21

Question 22

Question 23

Question 24

Question 25

Question 26

Question 27

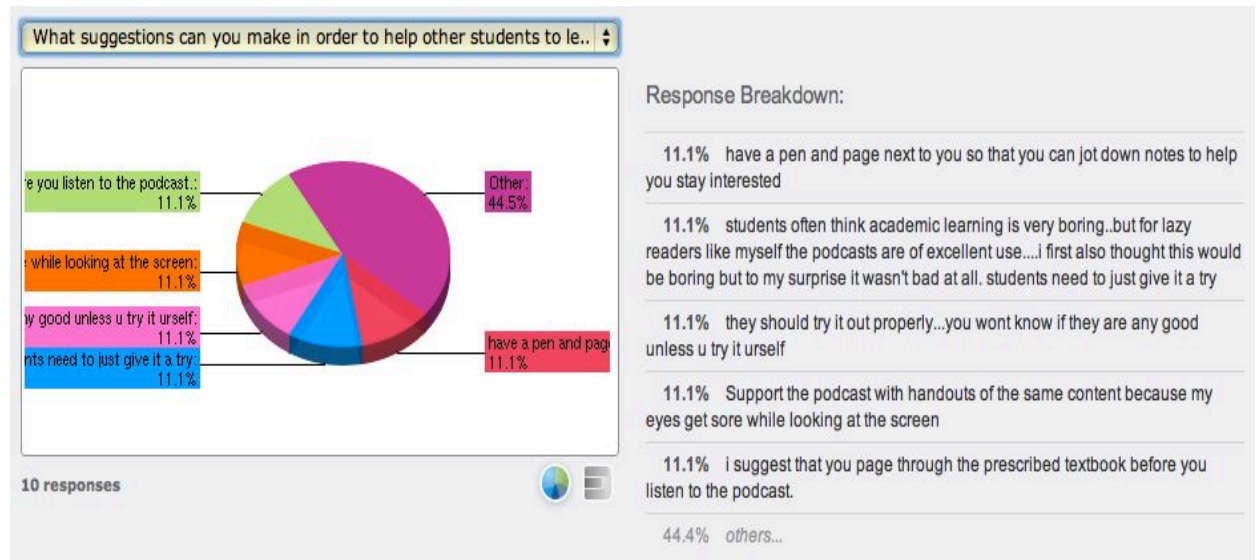

Question 28

Would you consider the podcast the best method of learning for this learning outcomes?
JUSTIFY your answer.

Count	Response
1	it may be very helpful, i in particular like to listen to information instead of just reading it
1	Yes most definitely. I learn better with pictures to enhance the learning process. This is a new acceptable method, which I feel would be the appropriate way of learning.
1	No because I am not used to this method of learning as i have been learning from books for many years. However, it will help with visual understanding. My eyes also get sore while looking at the screen and i get a headache.
1	it is an interesting method, will have to try it out first to see if it will be a better method of learning. i think it could work because you get to learn at your own pace and you are able to go back to something if you have forgotten.
1	i dont thinks its the best.it can be used as an extra learning method to enhance my understanding of pathology
1	no... i feel that i need more than the podcasts... its not the best method for me...i prefer lectures as well but it is also very good.
1	yes, not only was the theory behind the work well explained but the multimedia (x-rays) enhanced the explanation which i find is the key in learning this type of content.
1	not really as one tends to get bored after a while of just listening and not being stimulated interlectually.
1	if we were doing a practical exam on viewing images i would think this would help a student immensely.
1	Yes because as I said before you can learn at your own pace and always go back. This is important in that when there is confusion you can go view stuff again. Especially with pattern recognition the class slides sometimes are not adequate enough so in this way we can go over stuff at our own leisure and really grasp the important things.

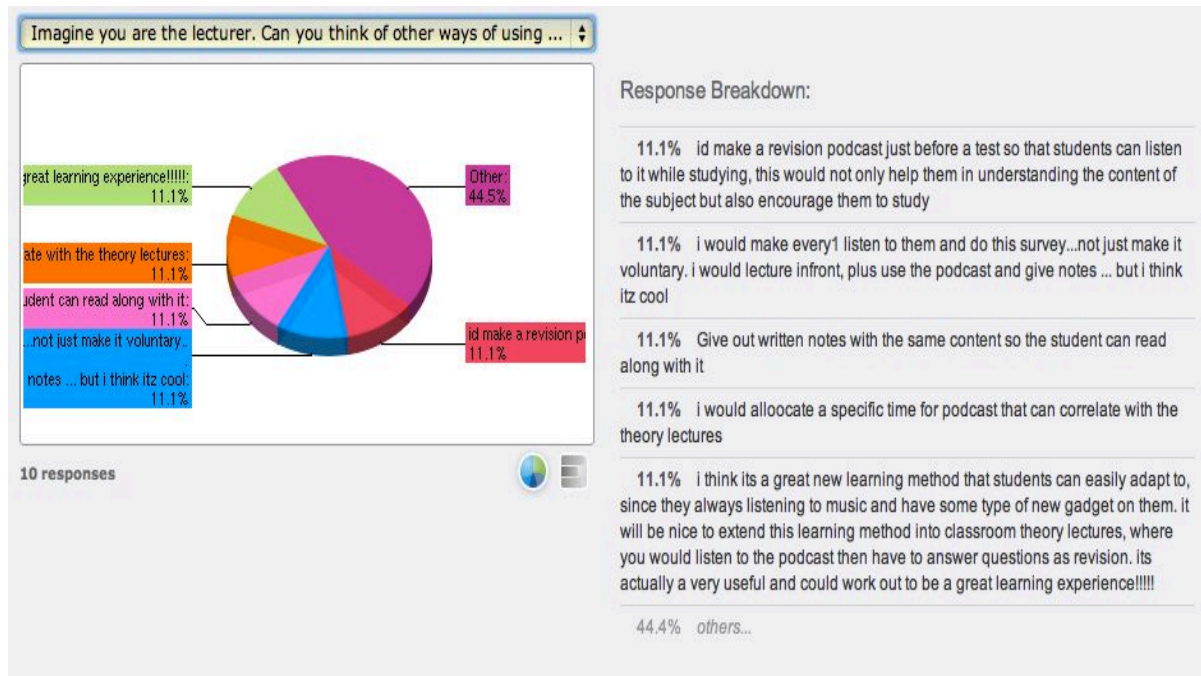

Question 29

What suggestions can you make in order to help other students to learn from podcasts?

Count	Response
1	
1	Try it! You will never know until you do.....
1	have a pen and page next to you so that you can jot down notes to help you stay interested
1	i suggest that you page through the prescribed textbook before you listen to the podcast.
1	make time for academic material and new ways of studying because it helps
1	they should try it out properly...you wont know if they are any good unless u try it urself
1	always have them on hand and keep listening to them regularly so that you will not forget, not only for test purposes but to use during clinical rotations and everyday work thereafter.
1	students often think academic learning is very boring..but for lazy readers like myself the podcasts are of excellent use....i first also thought this would be boring but to my surprise it wasn't bad at all. students need to just give it a try
1	This is good interactive learning in that we could use it to learn in our breaks, on the long drive home, etc so the time issue may never be a problem again. We can get together as a group as well to view it and then discuss later. So if some people are confused during a lecture and scared to ask, they can view for themselves and learn for themselves.
1	Support the podcast with handouts of the same content because my eyes get sore while looking at the screen

Question 30

Imagine you are the lecturer. Can you think of other ways of using podcasts or what you would do differently?

Count	Response
1	
1	Give out written notes with the same content so the student can read along with it
1	i would allocate a specific time for podcast that can correlate with the theory lectures
1	make the podcasts shorter and more concise to hold the listeners attention.
1	Okay firstly I would like use a little more arrows to visual what I am talking about. I would mention something then it would get highlighted so that the student would know exactly which part of the picture that I am looking at. Try also to use some humor in the podcast.
1	i would make every1 listen to them and do this survey...not just make it voluntary. i would lecture infront, plus use the podcast and give notes ... but i think itz cool
1	id make a revision podcast just before a test so that students can listen to it while studying, this would not only help them in understanding the content of the subject but also encourage them to study
1	i think its a great new learning method that students can easily adapt to, since they always listening to music and have some type of new gadget on them. it will be nice to extend this learning method into classroom theory lectures, where you would listen to the podcast then have to answer questions as revision. its actually a very useful and could work out to be a great learning experience!!!!
1	i would include other types of media to make it a more fun experince for eg randomly podcast jokes, new music and campus news. this would wanna make students check the podcasts more often therefore they would be seeing academic material aswell. you know students get bord easily.
1	I would ensure that a computer is a prerequisite for this course (I had to buy one this year, and it has added so much benefit to my learning, especially in the case of assignments and the slides which is bette to manipulate on the computer). The computer lab needs to be opened outside the lecture times, because sometimes lab facilities are not available. Therefore, one would have more time to watch these Podcasts.
